

Systems Management

Our Systems Management Interface enables our customers and users easy access to monitor and manage all of the multi diciplined technology systems such as Video surveillance, Access Control, Fire Detection, Fleet Management, Power and Energy Management, and retail solutions, that are installed and integrated at any business premises such as factories, mines, buildings, retail stores, etc, utilising a single point graphical user interface GUI, effectively leveraging visibility to control and manage all aspects of the business resources and assets whilst reducing risk and improving bottom line. Our Systems Management Interface can utilise recorded data to produce intelligent business reports, graphs, and trends. The Systems Management Interface will reduce the manpower cost associated with running and maintaining ICT infrastructure technology solutions and improve the operational efficiency of any business. This simply means that our customers now have the tools to leverage visibility into all aspects of their operational business at their fingertips.

2nd Line Support

Our Systems Management Interface can also remotely link to our Central Monitoring Command Centre whereby we can also offer to manage non-core functions by providing both full as well as partial remote management and site monitoring, in order to supplement an individual customers' support requirements. The Systems Management Interface is fully secure with multi level password protection to allow both on site and off site operators access only to the systems and levels that have been approved by the customer.
