

## Multiple Solutions, Seamless Integration

### Video Surveillance

Zaptronix supply a range of video surveillance systems for both small and large installations.

Our Systems Management Interface provides remote management capability with interactive site map allowing instant access to camera views, alarmed events, identification, and can be integrated to other systems such as access control, fire detection, gates and booms, etc.

### Retail Solutions

The Zaptronix retail solution is a combination of various systems that provide a holistic approach to shrinkage. Sophisticated video surveillance systems can be linked to a till interface to provide video footage linked to individual transactions, as well as electronic article surveillance. The Systems Management Interface provides useful video footage as well as statistical trends analysis.

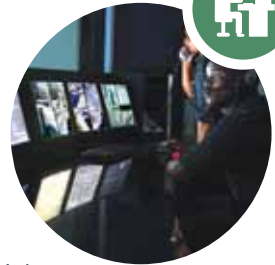

### Access Control

Zaptronix access control systems can be readily integrated to other site facilities such as elevator access, point of sale, vending machines, parking management, booms, gates, and turnstile access, fire alarm, utilising biometrics, swipe cards, proximity readers. The graphical user interface with site map and alarm gateway can provide useful statistical data and can also be accessed remotely.

### Central Monitoring

Our customer sites and fleets can benefit from having their sites and vehicles monitored 24/7.

This is more than just intrusion alarm monitoring, or vehicle tracking. Our integrated systems can monitor information on all site and fleet facilities such as video cameras, recorded data, Vehicle tracking data, access control, fire detection, power management and building management systems.

### Fire Detection

Zaptronix Fire detection systems comprise combinations of the following elements: detectors, control panels, automatic fire extinguishers, sounders, and management software and communications facilities. The control panel forms the heart of the fire detection system. These are available in varying sizes and are highly modular, allowing integration to other Zaptronix systems.

### Systems Management

Our Systems Management Interface enables our customers and users easy access to remotely monitor and manage all of the multi-disciplined technology systems such as Video surveillance, Access Control, Fire Detection, Fleet Management, Power and Energy Management, and retail solutions, that are installed and integrated at any business premises. "Leveraging Visibility"

### Tracking Solutions

The Zaptronix patented DUO fleet tracking and management system is complimented by a 24/7/365 bureau monitoring service. Our customers also enjoy full remote fleet management software for maximum control, and our technical support covers all major centres throughout South Africa and is known for unsurpassed service and workmanship. Our swap-out warranty ensures maximum uptime.

### Power Metering

Zaptronix Metering sells and supports a full range of electricity meters from single and three-phase to smart demand meters. Our remote meter reading software provides automated meter reading and billing applications. Our meters are competitively priced, highly accurate, issued with a full manufacturer's warranty, are IEC compliant, and the BE and DS range of meters are SABS approved.
